

$$-2\frac{d}{dx}y(x) + \frac{d^2}{dx^2}y(x) = 0$$

Решение задачи Коши:

$$y(0) = 3$$

$$\left(\begin{array}{l} 0 \text{ for } 0 = 1 \\ 1 \text{ for } 1 = 1 \\ 0 \text{ otherwise} \end{array} \right) \frac{d}{dx}y(x) \Big|_{x=0} = \frac{1}{2}$$

$$\frac{d}{dx}y(x) = 2C_2e^{2x}$$

$$y(x) = C_1 + C_2e^{2x}$$

$$\frac{1}{2} = 2C_2e^{0.2}$$

$$3 = C_1 + C_2e^{0.2}$$

$$C_1 = \frac{11}{4}$$

$$C_2 = \frac{1}{4}$$

$$y(x) = \frac{e^{2x}}{4} + \frac{11}{4}$$

Получить:

Ответ:

$$y(x) = C_1 + C_2e^{2x}$$
